How to refresh gnome-panel, other than using killall ?
hi,

I want to know if there's a way to refresh entire gnome-panel or only selected launchers on it, programmatically.

The problem I'm facing is, I change some fields in the .desktop file corresponding to a launcher, but it doesn't get reflected on the panel.

I can not use killall, as running applets get killed and some fail to come up afterwards.

So I wanted to know if there is some gnome-api which I can call, to refresh the panel or only the launcher also?

thanks,
Sanjay
