Thanks Todd;

I got it.

It's in the repo, yum install zenity should work. 2.18.2 is what's current. Did I miss something in the release notes or elsewhere that it's deprecated?

I admit I shot from the lip a bit, before looking in repos. In my own defence, I think last time (FC6) it was included with the core. And there was some talk of replacing it with gksudo.
