On date Sunday 2007-06-17 11:28:56 +0200, Stefano Sabatini gnomed:

Hi gnomers,

someone knows how to configure the panel log-out applet to show a dialog where appears the shutdown option?

This should be possible, since I had that possibility until yesterday when I killed the applet then re-added it to the panel, and I can't remember how I setted it before.

I don't want to have two separate applets, one for the session log-out and one for the system shutdown, but just one applet which asks for the type of logout required (system shut-down or boot, session logout etc.), when actually the logout applet only shows the following options:

- * Log Out
- * Switch User
- * Cancel

I googled around with no luck, and a quick session with gconf-editor didn't help too.

I remembered how I did it: I simply added to the panel a custom launcher and setted as command `gnome-save-session --kill`.

So now I can:

- * shutdown
- * log out
- * reboot

Cheers
