Hi;

Lots of little things going wrong with xchat-gnome (eg. won't open a chat). Do I need to install x-chat as well?

Hi;

My xchat-gnome no longer seems able to find the commands.conf file. All the command short cuts I have entered used to work, now I only get the basic commands.

I checked the gconfig-editor; it's listed there as /home/user/.xchat-gnome/commands.conf — I think that is as it should be, at least that is the directory where it is now.
