

Lost file association – urgent

-

I just returned from a week's vacation and brought my CentOS 5.0 system back up, updated it, and somehow it has lost all the .doc file associations. These used to be associated with the OpenOffice writer, but that's now gone. ACTually, all the "open with" associations are gone (rtf's now think they should be opened by the text editor!).

I'm not sure exactly what the association should be – can anyone point me in the right direction?

Thanks.
