Hi Bjørn !

I am running Gnome 2.14.3. the method I generally use is this :

0 – left click one time on "No Icon" when the 'Create Launcher' window appears

1 – click "browse ..." in the Browse Icons window

2 – click "browse ..." in the Browser windows

2 – select the folder in which there are the icons you would like to use

3 – click "open"

4 – move the mouse pointer where the path of the icons is shown – top left I suppose

5– left-click one time so that the cursor will start blinking

6– HIT the ENTER key on the keyboard

voilà ! you should have your icons loaded

I hope this is of help, let me know :-)

danielle
