Hello

Add the option below "ServerFlags" section in xorg.conf file

```
Section "ServerFlags"
Option "AIGLX" "off"
Option "AllowMouseOpenFail" "true"
Option "Xinerama" "1"
EndSection
```

Hello

Would you post "/etc/X11/xorg.conf" file from the affected system.

Ok, below. I'd be interested to know why you suspect an xorg config since it seems like xorg is running fine (get a normal blank window with the "X" mouse cursor).

```
# /etc/X11/xorg.conf (xorg X Window System server configuration file)
#
# This file was generated by dexconf, the Debian X Configuration tool, using
# values from the debconf database.
#
# Edit this file with caution, and see the /etc/X11/xorg.conf manual page.
# (Type "man /etc/X11/xorg.conf" at the shell prompt.)
#
# This file is automatically updated on xserver-xorg package upgrades *only*
# if it has not been modified since the last upgrade of the xserver-xorg
# package.
#
```

## Re: No window manager on second screen

```
# If you have edited this file but would like it to be automatically updated
# again, run the following command:
# sudo dpkg-reconfigure --phigh xserver-xorg
```

### Section "ServerLayout"

```
Identifier "Default Layout"
