Hi

We have translated the gnome files in some of the indian languages and want to contribute to the gnome community,how to do that.  
The languages in which we have translated are:

Hindi,tamil,telugu,urdu,konkani,marathi,oriya,bengali,gujarati,punjabi,kannada

We also have developed a nice front end for presentation tool ie keyjnote.Earlier keyjnote did not have a front end to sleect the file and browse for transitions and many more things.What I need to do to upload the package to upstream.Can this conme under gnome.

Help me out,Otherwise will be become a rework for the community.

Excellent work! I tend to agree with Mr Shuttleworth when he says that I10n is one of the most tangible strengths FOSS has over proprietary SW.

I think you are better off contacting the I10n teams on their mailing list (<http://live.gnome.org/TranslationProject/MailingList>). You ought to be able to find all other information regarding I18n and I10n on the translation wiki: <http://live.gnome.org/TranslationProject> . Hope this helps.

/M
