Hi

When I right click an item in Konq or search the behaviour of "open with" changes sometimes it offers what I did last, for example open with kate, on certain things it doesn't. How can I change things so that the previous open withs are allways shown?

Also how can I add additional commands to the right click operations menu? For example open with kate. That would be my preferred solution.

Regards John

PS The spell check seems to work every where it should apart from the subject line of an email?
