Hi, why does Konqueror have to count through (and seemingly look at) every file in a directory, before moving, copying or deleting it?

Because it wants to show a progress information.

I just deleted a folder containing about 260MB of mixed files – but before Konqueror deleted them, it laboriously counted through every single file in the directory. This took nearly 6 minutes! (On a 3.2 GHZ Machine with 1GB of RAM, that is very long for such a relatively small folder).

This is really a long time. How much files did you have in there?

Cheers,
Kevin
