Hello folks,

Recently i compiled 2.6.0-test2 test kernel for testing purpose but i have a problem with mounting my SCSI hard disk (the same hardware works on 2.4.21 kernel). System is Slackware Linux 9.0 with gcc 3.2.2

My hardware is NFORCE2 based GigaByte 7NXP board with Athlon 2500+ cpu Adaptec AHA-2940U2W controller with Plextor SCSI cdrom and cdrw and IBM 36LZX 36gig disk.

When booting the 2.6.0-test2 (tried 2.6.0-test2-mm1 kernel too) the SCSI subsystem will not probe the disk but it recognizes both of the cdroms just fine and while doing so the cdrom lights will flash on and off.

I tried with both `devfs=mount` and `devfs=nomount` option as well as `root=/dev/sda3` and `root=0803` as suggested on the list (tried also with `root=/dev/scsi/host0/bus0/target6/lun0`).

Attached is .config from 2.6.0-test2 kernel.

I took few snaps from the boot process which can be viewed at <http://www.blazebox.homeip.net:81/diffie/images/linux-2.6.0-test2/>

I am not subscribed to the list, please CC any replies to me.

I can provide more information upon request. Thank you for your help in advance.

Regards,

Paul B.

Linux-Kernel: 2.6.0-test2 (2.6.0-test2-mm1) unknown block device when mounting SCSI disk.
