Anyone who uses lk-changelog.pl or shortlog
(YES THIS COMPRISES YOU, MARCELO ;-)
with these option combinations:

--mode=terse AND NOT --noobfuscate

--mode=oneline AND NOT --noobfuscate

please be aware that address obfuscation of unknown addresses does not work (I'll consider that an information leak given that addresses and logs are web accessible through archives and are actually harvested by those saboteurs that call themselves direct advertisers), so you may get lines like:

o example change log entry (user@example.org)

Rather than

o example change log entry (user:example.org)

The issue was fixed in 0.166; 0.167 is the latest release version.

Get it from:

BK: [bk://129.217.163.1](http://129.217.163.1) (NO trailing slash, bkd -xcd there!)

Once Linus pulls these changes, it will also become available at the

official repository: [bk://kernel.bkbits.net/torvalds/tools/](http://kernel.bkbits.net/torvalds/tools/)

WWW: <http://mandree.home.pages.de/linux/kernel/>
this site carries releases and GnuPG signatures

HEADS UP lk-changelog/shortlog: security announcement

Linux-Kernel: HEADS UP lk-changelog/shortlog: security announcement

(Yes, the GPG signing key has changed recently,
the days of PGP 2.x are passing...)
