OK, Im trying to run 2.6.0-test6 on top of RH9.
I have progress in some areas but not others.

NETWORKING. is a nogo.

If I compile the driver 3c59x as a module, it gets loaded, but
with the driver in the kernel or as a module, I get the messages
in the messages file (during boot) or when I do a ./network start
from /etc/rc.d/init.d

```
---  
[root@orion init.d]# ./network* restart  
Shutting down interface eth0:                [ OK ]  
Shutting down loopback interface:           [ OK ]  
Setting network parameters:                 [ OK ]  
Bringing up loopback interface:  arping: socket: Address family not supported  
by protocol  
Error, some other host already uses address 127.0.0.1.                [FAILED]  
Bringing up interface eth0:  arping: socket: Address family not supported by  
protocol  
Error, some other host already uses address 204.134.2.19.            [FAILED]  
---
```
