Hi list,

Out of curiosity, has anyone else noticed something odd with Bluetooth in 2.6.x kernels? On my Thinkpad X31 I can switch it on/off with Fn+F5. Switching it on is no problem, but switching it off causes solid hang of the Thinkpad. Only SysRq+b works.

It is not the whole world, but a little irritating. Also, I use Bluetooth to hot-sync my Tungsten T|3. Same problem occurs on the 4th – 6th sync, solid hang of the Thinkpad. No debug output yet, if any Bluetooth developers are interested to have this fixed, I am game to help debug this.

Regards,
