Note that since ide-cs has problems with SMP it will have problems with PREEMPT as well...

A now old report...

<http://pcmcia-cs.sourceforge.net/cgi-bin/HyperNews/get/pcmcia/ide/28.html?nogifs>

I have seen problems like this recently (2.4.21) and thought I have read this somewhere more recent – but can not find it. I will create a bug report. (Summary: Freezes with SMP, same kernel works with option nosmp) Remember that drivers that are not SMP safe won't be PREEMPT safe either.

Anyway there are interrupt related PCMCIA problems...
