Hi All,

I have a lot of unaligned accesses in kernel space:

kernel unaligned acc : 2191330

(pc=ffffffc002557d8,va=ffffffc00256059)

It seems to be located in the networking part (iptables?) from the kernel. Can someone please help me how to find the location of these uac's? I already have recompiled the kernel with debugging enabled and tried to debug it with gdb.

Another question: What's the meaning of va?

Thank you very much!

Regards

Marc
