Twice while using -L2 my IBM PS2 keyboard has become completely non-responsive. USB mouse and everything else seems to be fine, but no LEDs or anything from the keyboard.

On both occasions the last key I hit on the keyboard was numlock and the numlock did not come on and I had to reboot after that.

UP, x86, gcc 2.95, scsi + ide, bttv

Resolved in M5?

Regards,

Shane
