HI

Few days ago I noticed problem with cd-rom control:

I put cd-rom damaged disc into cd-rom drive and I want to run it.

cd-rom (tried to start cd but he couldn't do this) and application

stoped

doing anything (not responding).

OK. I thought: umount the cd (I saw: device is busy)

OK. I thought: kill process (proces wasn't killed - I tried many time)

OK. I thought: I give up, I do shutdown (shutdown was hung on unmounting file system).

How can I fight with this (if it's possible).

I know: under windows I can take out cd - brutal force, but under linux I can't.

Some my frends have the same problem with floppy drive.

PS. Sorry for my poor english.

TolekB.
