Hello,

when copy-to-user and alike does fail
for the solaris personality on sparc64
did fail then it is possible that the
current function gets left with an error
without prior releasing the uts-semaphore.

the attached diff provides a patch that
is supposed to fix that behaviour.
i was not able to test this in the wild
due to lack of the respective hardware, so
any reports from machine owners would be nice.

-Alex.
