Hi folks ,

I ve heard that the divert socket mechanism is not supported anymore in the current linux kernels .

I was surprised to know that , is there a reason ?

then I wanted to use an older kernel but I couldn t find informations about which kernel support the divert mechanism ,

I know there are some patches but couldn t find any of them ,

so please, does any one knows where can i have such a patch to make my kernel support divert sockets ?

Many thanks .
