```

Services real mode BIOS calls to determine which disk
BIOS tries boot from. This information is then exported via sysfs.

- This option is experimental, but believed to be safe,
- and most disk controller BIOS vendors do not yet implement this feature.
- + This option is experimental and is known to fail to boot on some
- + obscure configurations. Most disk controller BIOS vendors do
- + not yet implement this feature.

```
config EFI_VARS
    tristate "EFI Variable Support via sysfs"
```
