Sent this out a few days ago, haven't seen it in the list yet (sent here or on any of the web archives). Figured the attachments were probably too large, so I bzip'd them.

Hello,

I was trying to get some stuff working, and switched my Abit VP6 MultiProcessor Specification from 1.4 to 1.1, hoping that might clean some stuff up. Looked good for a bit, but left it running overnight and came back to this. Also found a crash that 1.4 put in, that I never saw before.

Boot messages say 2.6.8, but its definitely 2.6.9-rc3
