

# Kernel 2.6.10 Can't Open Initial Console on FC3

The newly compiled kernel gets through everything OK including mounting the root file system as read-only EXT3. However, it freezes on the very last line, which says:

Warning: unable to open an initial console

If I switch back over to the kernel that came with the distribution, everything boots fine, so I'm assuming the problem lies in the way I configured the kernel.

I ran "find / -name genromfs" which found nothing.

I feel like an idiot for posting this. I'm probably missing something obvious.

I have:

- \* Pentium 3
- \* 256 MB RAM
- \* PCI ATI Rage 128 Graphics Card
- \* PS/2 Mouse
- \* PS/2 Keyboard
- \* Fedora Core 3

Thanks in advance.

# inittab This file describes how the INIT process should set up
# the system in a certain run–level.
#
# Author: Miquel van Smoorenburg, <miquels@drinkel.nl.mugnet.org>
# Modified for RHS Linux by Marc Ewing and Donnie Barnes
#

# Default runlevel. The runlevels used by RHS are:
# 0 – halt (Do NOT set initdefault to this)
# 1 – Single user mode
# 2 – Multiuser, without NFS (The same as 3, if you do not have networking)
# 3 – Full multiuser mode
# 4 – unused
# 5 – X11
# 6 – reboot (Do NOT set initdefault to this)
