To: Russell King <rmk+lkml@arm.linux.org.uk>

Greetings gentlemen,

please find the patch against 2.6.13 tree with Russel's proposal taken into account.

This patch that allows passing the pointer to custom power management routine (via `platform_device`) to 8250 serial driver.

Please note that the exported functions' API remained the same.

The only change for the outer works is the format of platform data representation for the 8250 serial devices.

Best regards,

Vitaly
