I seriously demand that this be changed into "RTC broekn under..."! :)

>> BTW, other than MPlayer problems, everything else works great.

BTW2, 2.6.15 has an option in ALSA to use RTC as timing source (CONFIG\_SND\_RTCTIMER). I do not have it activated ATM, nor do I use it (as said, I used "-ao null" for mplayer), but would use of alsa with this rtc timesourcing also crash?

>Bradley and Jan, try the below patch and see if it doesn't deadlock the >system. I'm not sure why they pulled out the mod\_timer add\_timer and >del\_timer from the rtc\_lock, but there might be a call back to it.

Well, it did not deadlock my system. Interesting! It displayed "BUG", as posted multiple times here. Otherwise, it just oopsed. That is, I could continue using the system, with the exception, of course, /dev/rtc. Opening rtc however did not lock a process trying to do so, but instead (as designed in the code) returns -EBUSY.

>Index: linux-2.6.15-rc7-rt1/drivers/char/rtc.c

This patch fixes the rtc BUG for me.
