Tejun Heo wrote:

Hello, v0.2 of quilt2git available. New in v0.2.

- * handles new git HEAD file format properly (regular file storing ref: ...)
- * makes use of mail format header from quilt patch description. From: becomes the author, Subject: the subject of the patch. All commit information should be maintained through git2quilt -> quilt2git now.
- * --signoff option added. This option is simply passed to git-commit.
- * little fixes

<http://home-tj.org/files/misc/quilt2git-0.2>
<http://home-tj.org/files/misc/git2quilt-0.1>

Thanks.

FWIW, I have a similar script to import a quilt export as an stgit patch series, it's really simple but quite useful:
