Hi,

I've created a new entry under /proc, to make tests.

I've defined an static int var=0;

Then I link my proc entry read function to a function that only performs this:

```
int length;  
length=sprintf(page,"Value %d",var++);  
  
return length;
```

But when I cat/vi the file continuously I get:

```
Value 0  
Value 3  
Value 6
```

etc...

Why is this three numbers increment?

Thanks
Pradeep
