- It seems to compile.

Well, depends :)

Ran into this on -mm1 also. Haven't digged into finding out why ?

```
LD init/built-in.o
LD .tmp_vmlinux1
arch/x86_64/mm/built-in.o(.init.text+0x1298): In function
`__change_page_attr':
arch/x86_64/mm/pageattr.c:58: undefined reference to
`srat_reserve_add_area'
make: *** [.tmp_vmlinux1] Error 1
```

Ideas ?

Yes, that'll happen. I guess you'll need to set CONFIG_ACPI_NUMA for now.

Fixed.

Re: 2.6.16-mm2

(I could have sworn i added that ifdef earlier already, weird)

–Andi (who thinks we have too many CONFIGs)

Thanks. Setting CONFIG_X86_64_ACPI_NUMA=y solved my problem.

I carry around known-to-work .config file for each machine and don't bother selecting new config options :(
