NAK if my vote is worth \$.02. ieee1394 has been broken since 2.6.13-rc1, and apparently no one cares. I have a firewire movie camera I haven't been able to use since then. A Sony DVR-TV460.

You may help by narrowing it down to exact 2.6.x[-rcY] where it broke.

Apparently it broke with the commits that came in between 2.6.12 and 2.6.13-rc1.

I can't get any closer than that, and someone else has also commented that this is when it died. I hadn't needed it between may-june of last year and now, so I hadn't dug out the camera and tested it until the missus asked if I could make dvd's of some of her vhs stuff since the vhs player is on its last legs, not from head wear, but something on the board requires a healthy slap in the chops to make it work after its been off for a few weeks.

I was going to use the camera as a transcoder between the sloppily timed nts, and the firewire port. Now it locks kino up tighter than a drum the minute you select the capture screen. You have to click on the close button, and wait for the x server to ask you if you want to stop the process since it isn't responding. But that once done, seems to clean up the mess nicely.

Cheers, Gene
People having trouble with vz bouncing email to me should add the word
'online' between the 'verizon', and the dot which bypasses vz's
stupid bounce rules. I do use spamassassin too. :-)
