Andi,

See <http://marc.theaimsgroup.com/?l=linux-kernel&m=115897798118500&w=2> for my original report.

I've now built without NO\_HZ (but still HIGH\_RES\_TIMERS) and that fixes the issue. You've got most of my machine specs since previous, even an output from dmidecode, but feel free to ask for more if this bug interests you.

I'm not particularly eager to get it solved... the nvidia driver still needs one more hack for the glue to build against -rt3.

Mvh  
Mats Johannesson
