AFAIK, the 'D' in LCD is already an abbreviation for "display", so could we name it lcdisplay or something like that?

My first guess was "lcd" ("d" as display), but there were already devices with such name. So I chose "display", as they are additional small displays (LCD or not). However, people thought it was a very common name. Then I chose "LCD Display". Such name is more expressive (it is "a Display, LCD type") and doesn't makes trouble with new lcd screens, or the "lcd" drivers, or...

I don't care really about the name with or without "double d". Can someone else give his/her opinion about this?

Thank you,
Miguel Ojeda
