Sorry, really for -mm .

On Sat, 2006-12-30 at 07:48 -0800, Daniel Walker wrote:

If you have both SLIM and selinux compiled into your kernel selinux will panic if it can't register itself. The code below,

```
if (register_security (&selinux_ops))
panic("SELinux: Unable to register with kernel.\n");
```

"security/selinux/hooks.c" 5014 lines --95%-- 4811,35 96%

This could be a bug report cause I bet there's a better way to make these mutually exclusive.
