when the ip_tables module is loaded automatically when inserting the first rule, something gets screwed up, as `-L -v -n` shows:

```
17:39 ichi:~ # lsmod | grep ip_tables
17:39 ichi:~ # iptables -t mangle -A FORWARD -i eth1 -j MARK --set-mark 161
17:39 ichi:~ # iptables -t mangle -A FORWARD -i eth1 -j MARK --set-mark 161
17:39 ichi:~ # iptables -t mangle -L -v -n | grep eth1
p b targ pr opt in out src dst
0 0 MARK 0 -- eth1 * 0.0.0.0/0 0.0.0.0/0 0xa1
0 0 MARK 0 -- eth1 * 0.0.0.0/0 0.0.0.0/0 MARK set 0xa1
```

Everything is fine if ip_tables was loaded before.

This box runs 2.6.18.5. Can anyone confirm this bug?

Looks like this problem was fixed between iptables releases 1.3.5 and 1.3.7 (the old buggy version was trying to detect whether the kernel supports the newer MARK target version before loading the ip_tables module, therefore the check was giving bogus results).
