I demand that I definitely did write...

Add a quirk to allow ENE PCI SD card readers to work again

Support for these devices was broken for 2.6.18-rc1 and later by commit 146ad66eac836c0b976c98f428d73e1f6a75270d, which added voltage level support.

This restores the previous behaviour for these devices by ensuring that when the voltage is changed, only one write to set the voltage is performed.

[snip]

Oops, forgot to ask – could people test and report back? lspci output (for your device) may be helpful.
