I had the same type of problem using an unstable power supply – after replacing it the problems were gone ...

Hm.. my shuttle box has only a 350W power supply, that could indeed be the problem, as I have an Athlon 64 X2 4400+ CPU (dual core), two SATA-II 500GB harddrives and a GeForce 7800GTX.  
Damn.. I thought I payed attention to the power supply when I bought the components for my computer :(
