```
+/* gives us jffs2_subsys */  
+static decl_subsys(jffs2, NULL, NULL);
```

There is actually a file-system subsystem – look up for fs\_subsys. It is declared at fs/namespace.c.

Further down the patch you'll see:

```
+ kset_set_kset_s(&jffs2_subsys, fs_subsys);
```

There was a reason for doing that instead using fs\_subsys in the above although I can't remember why offhand. I did try it and it didn't work as expected...

Regards,

Richard
