Currently we have a lot of special case code and a lot of limitations because we cannot count on the initial boot time page tables being in the format our page table handling routines know how to manipulate. So this patch rewrites the code that initializes our boot time page tables.

Sounds reasonable, but for post .22

Sure. A little aging to gain confidence with it is reasonable. At this point I finally have the glitches worked out so these patches needed to get out of my private queue.

Eric
