Hello; sorry for not sending a threaded e-mail, I tested echo mem > /sys/power/state on my macbook pro 15' with all modules loaded i.g. uvcvideo,fglrx,ath\_pci, etc... and to my amazement it actually worked, instead of a blank screen and a reboot, the screen appears. The appletouch loses it's scroll functionality, as well as the bluetooth mighty mouse, wpa\_supplicant seems to not respond, but other than that it works over here ("knock on wood"); 2.6.25-rc6 didn't work for me.
