* Alex Chiang <achiang@xxxxxx>:

I've gotten as far as successfully creating a btrfs filesystem (at least that's what btrfsck tells me), but haven't been able to mount it yet, probably because of the sector size issue.

Oh, and for those curious, here's the output of btrfsck:

```
[root@canola btrfs-progs-unstable]# btrfsck /dev/cciss/c2d1
found device 1 on /dev/cciss/c2d1
lowest devid now 1
found Btrfs on /dev/cciss/c2d1 with 1 devices
opening /dev/cciss/c2d1 devid 1 fd 4
found 102400 bytes used err is 0
total csum bytes: 0
total tree bytes: 81920
btree space waste bytes: 79462
file data blocks allocated: 0
referenced 0
```

[yes, that's working over the cciss block device ;)]

/ac
