So, between Monday midnight and Thursday morning, when do you expect me to sort the resulting mess out, given that I was not even able to be in front of a computer until about 10pm on Tuesday and Wednesday?

How about delegate some of the control to other people ? There's something wrong if it has to be you that sorts it out every time – especially as you effectively manage as many platforms as everyone else put together right now.

I believe I pointed at the patch required to fix the problem via this URL:

<http://www.arm.linux.org.uk/developer/patches/viewpatch.php?id=5010/1>

A subset of that patch had also already been discussed between Philipp, akpm and myself. The URL also shows when it was applied (though not to a branch of my tree I could've pushed into mainline at that stage.)

The fix was already known... The fix had been pointed out by me during the various mails I got about the breakage... I'd effectively already approved the fix by applying it... And I had said I wouldn't be able to sort it until Thursday.

Yes, maybe I should've said to Andrew "please grab this patch off this URL and ensure it gets to Linus ASAP." Hind sight is always a wonderful thing.
