On Friday, 14 of November 2008, Nico -telmich- Schottelius wrote:

Hello!

Using 2.6.28-rc4 and \*NO\* acpi\_sleep=s3\_bios:

- suspend and wakeup on console works (!)
- > this is new, before screen was black after wakeup
- suspend on x11 works
- wakeup on x11 freezes, causes automatic reboot
- switch away from x11 to console,
- suspend on console:
- wakeup -> works
- switch to x11 -> freeze & reboot

It would be nice, if someone could CC me to

'nico-linux-lenovox200-suspend at schottelius.org'

if there is some progress made. Currently it's just getting me tired always having to fsck the filesystem after a suspend try.

Well, given that you appear to be the only person able to reproduce this problem, it'll rather be difficult to debug it without your help.

Thanks,  
Rafael
