All greetings!

Has put RedHat with automatic start X-server but something has
fied more shortly Now the automatic device the è-server is not started
only through startx

but

to be loaded Gnome I has got used already to KDE and I do not know where
to register that

was started KDE Wanted was to rearrange system and to not put Gnome
in general but me the dialing program in an Internet is necessary. KDE
does not work –

goes in cycles installation of loudness of the modem. Modem Courier 3453

(external). Who can faced such problem
