Hello All,

I think the passwd on my installation of mysql of mysql-standard-4.0.14-pc-linux-i686 is corrupted. I can't login with the root account. I was able to do so till last week.

I trying to follow the instructions on resetting the passwd, but I get the following err msg.

```
# ./mysqld --skip-grant-tables Fatal error:
```

```
Please read "Security" section of the manual to find out how to run mysqld as root!
```

Any ideas?

Saqib Ali
