I am running Red Hat 9I have just compiled the kernel 2.6.0–test5 on a Dell 1400SC with SCSI hard drives. After doing all the steps needed to compile the kernel, I then type Make Install. I now get " No module aic7xxx found for kernel 2.6.0–test5 mkinitrd failed.

I then downloaded module–init–tools from [wwwkernel.org](http://www.kernel.org). What is the next step?
