

Majordomo and spoofers

Source: <http://linux.derkeiler.com/Mailing-Lists/RedHat/2003-10/2996.html>

Is there any way to secure a list in Majordomo to prevent address spoofing?

I have some private majordomo lists that the MickySoft crazies are attempting to use real mailboxes at my web site to spoof. The only thing stopping them so far is my size limit.

Can I limit to a particular network address too?

Regards,
Tom Klem
