I saw your mail in red hat mailing list and you said that you already setup no anonymous access, just local user can. I would like that way. I have problem with Redhat 9.0 with vsftp 1.1. At vsftpd.conf i set anonymous\_enabled=NO and local\_enabled=YES. What's more at /etc/pam.d/vsftpd.ftp-user i already add anonymous in this file because pam.d will read vsftpd.ftp-user file to not allow anonymous to login. Why anon still can login, but local user can't. Moreover when i would like to login using local user logon, there're message shown "530 this ftp server is Anonymous ftp server only". I don't understand .....

Best Regards,
