Hello,

For those of you who are interested I made available (S)RPM's for libmccrypt, libmccrypt-devel and mccrypt for both Fedora Core 1 and Red Hat Linux 9 at <http://www.ottolander.nl/opensource/mccrypt/mccrypt.html> .

I feel it would be nice if these RPM's and libmhash would be included in the core distribution, so PHP can be built with support for libmccrypt and libmhash, as fe SUSE already does.

Feel free to contact me about any improvements you think I should make to the SPEC files.

Bye,  
Leonard.
