Hello folks, someone use the kazaa software?

I have kazaa lite installed in some computers with "windows me". When my internet server was a redhat 7.3 I do not have any problems with kazaa, but with redhat 9 in my internet server, I cannot establish any connection from any computer in the net.

The only difference is, in the redhat 7.3 I use ipchains like a firewall and in the redhat 9 I use iptables. I use squid like a proxy too, but it was configured at the same way in both versions....

Anybody can help me with a little push...?

I need an example from iptables configuration to make work kazaa, if you need see my iptables configuration I can send you...

=====
