Hello,

I wanted to block out three class A networks, say, 200.\*, 210.\*, and 211.\*,  
is the correct syntax this:

```
200. REJECT
210. REJECT
211. REJECT
```

Or is it this?

```
200 REJECT
210 REJECT
211 REJECT
```

And for hostnames/servers, would it be

```
.com.ar REJECT
or...
com.ar REJECT
```

thanks  
Joe
