hi all..

probablyt a stupid question:

how do i make environmental variables to stick?

if i do:

```
export JAVA_HOME="/path/to/jdk"
```

and then:

```
# env
```

i can see the java home defined. but if i log out and then log in again.

\$JAVA_HOME disappeared from the env list. the same with PATH and others..

on rh8.0...

thanks...
